Brand guidelines · Version 1.0 · November 2026

MINASTIR

See the whole ground.

minastir.io

One view of every camera.

Minastir turns the security cameras a site already has into one live 3D map. Instead of a wall of disconnected feeds, you see the place: every camera where it really is, every view cone showing what it really covers, every blind spot named.

The name is Sindarin for *tower-watcher*, the guard on the high tower who sees the whole country at once. That is the promise of the product and the posture of the brand: calm, high up, watchful, never panicked. It should feel like premium hardware, quiet and precise, like the display in a well-made car.

Primary tagline

See the whole ground.

Descriptor where context is missing: 3D camera mapping. Never "AI surveillance".

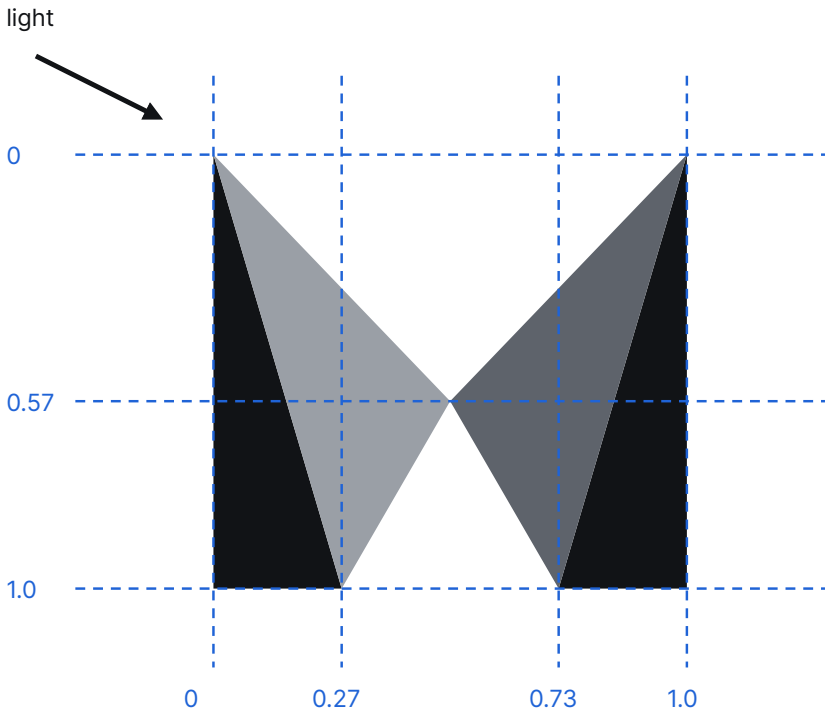

For	Site operators and security leads (warehouses, construction, campuses, retail, venues) and homeowners with four or more cameras.
Who are stuck with	Grids of disconnected feeds, no idea where each camera points, blind spots found after an incident.
Minastir is	A spatial layer for existing cameras that rebuilds the site in 3D and places every live feed in it.
Unlike	VMS grids (Milestone, Genetec, UniFi Protect) that show feeds as tiles.

Facet.

An M built from four triangles. The outer legs are solid; the inner faces fold toward a point, lit from the left, so the letter reads as a three-dimensional surface.

The inner faces form a downward cone: the space a camera maps. The light always comes from the left, so the left inner face is always the lighter one, on any background.

- **Outer legs** — solid ink: #F2F3F5 on dark, #111316 on light.
- **Left face** — the lit face: #B9BEC5 on dark, #9A9FA6 on light.
- **Right face** — the shaded face: #7D8288 on dark, #5E636B on light.

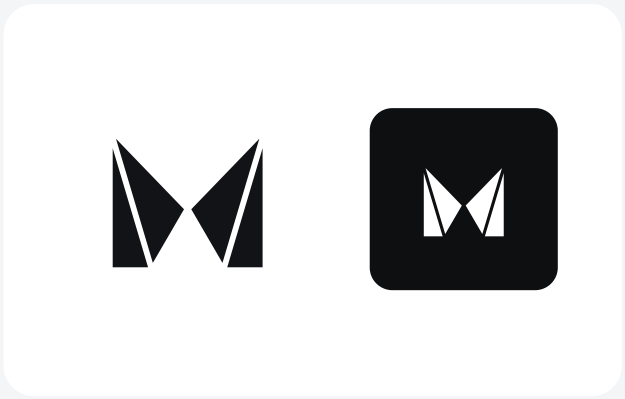

Three marks, two lockups.

Two-tone, for dark grounds. The default.

Two-tone, for light grounds.

One colour, with gaps between facets. Under 24px, single-ink print, engraving.

Lockup on dark.

Lockup on light.

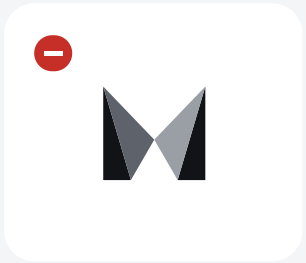

Space and size.

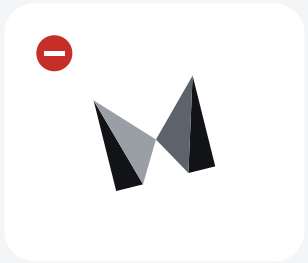

- **Lockup:** mark left, wordmark right. Gap = 45% of the mark's height. Wordmark cap height = 40% of the mark's height, centred on it.
- **Clear space:** the width of one outer leg (x) on every side. Nothing enters it: no text, edges or other logos.
- **Minimum size:** mono mark 16px / 4mm; two-tone mark 24px / 6mm; lockup 96px / 25mm wide.
- **Wordmark alone** is allowed where the mark already appears nearby (app chrome, signatures).

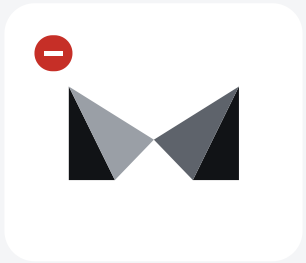

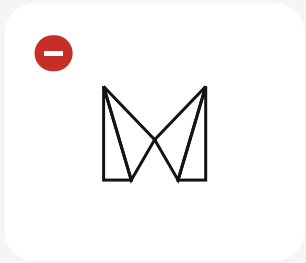

Don't

Add colour.

Swap the lit face.

Rotate it.

Stretch it.

Outline it.

Use on low-contrast grounds.

Black, white and ash.

The calm of a car's driving display, not a control room. Charcoal carries 70–80% of every screen; white is the accent; blue and red only ever mean state.

Every text pair passes WCAG AA (4.5:1) in both themes. Never use neon, gradients between colours, green "hacker" palettes or camouflage tones.

Three faces, three jobs.

Wordmark only

MINASTIR

ABCDEFGHIJKLM

Michroma, all caps, +0.2em tracking. Never for headlines or interface text.

Display and readouts

Every camera. One world.

78%

Outfit 500 for headlines in sentence case; 300 for big numbers, like a speedometer.

Interface and text

Minastir stitches every feed into one live 3D map of your site.

Driveway camera · 84% · 2:14 am

Inter for everything else, including data. Tabular numbers for IDs, times and percentages. No monospace.

Style	Face	Size / line	Use
Display XL	Outfit 500	76 / 76 px, −0.03em	One hero headline per page
Display L	Outfit 500	48 / 52 px, −0.02em	Section openers, ad headlines
Numeral	Outfit 300	64 / 64 px	Coverage %, camera counts
Body	Inter 400	15 / 22 px	Default interface and copy
Label	Inter 500	13 / 18 px	Chips, tags, map labels, sentence case

Soft, rounded, quiet.

Buttons

Map my site

Coverage audit

One white primary per view. Verbs, not "Submit".

Map labels and status

- Front Yard (Turret)
- Selected camera
- West lawn · not covered

Dark pills with a status dot. Colour always paired with words.

Shape and space

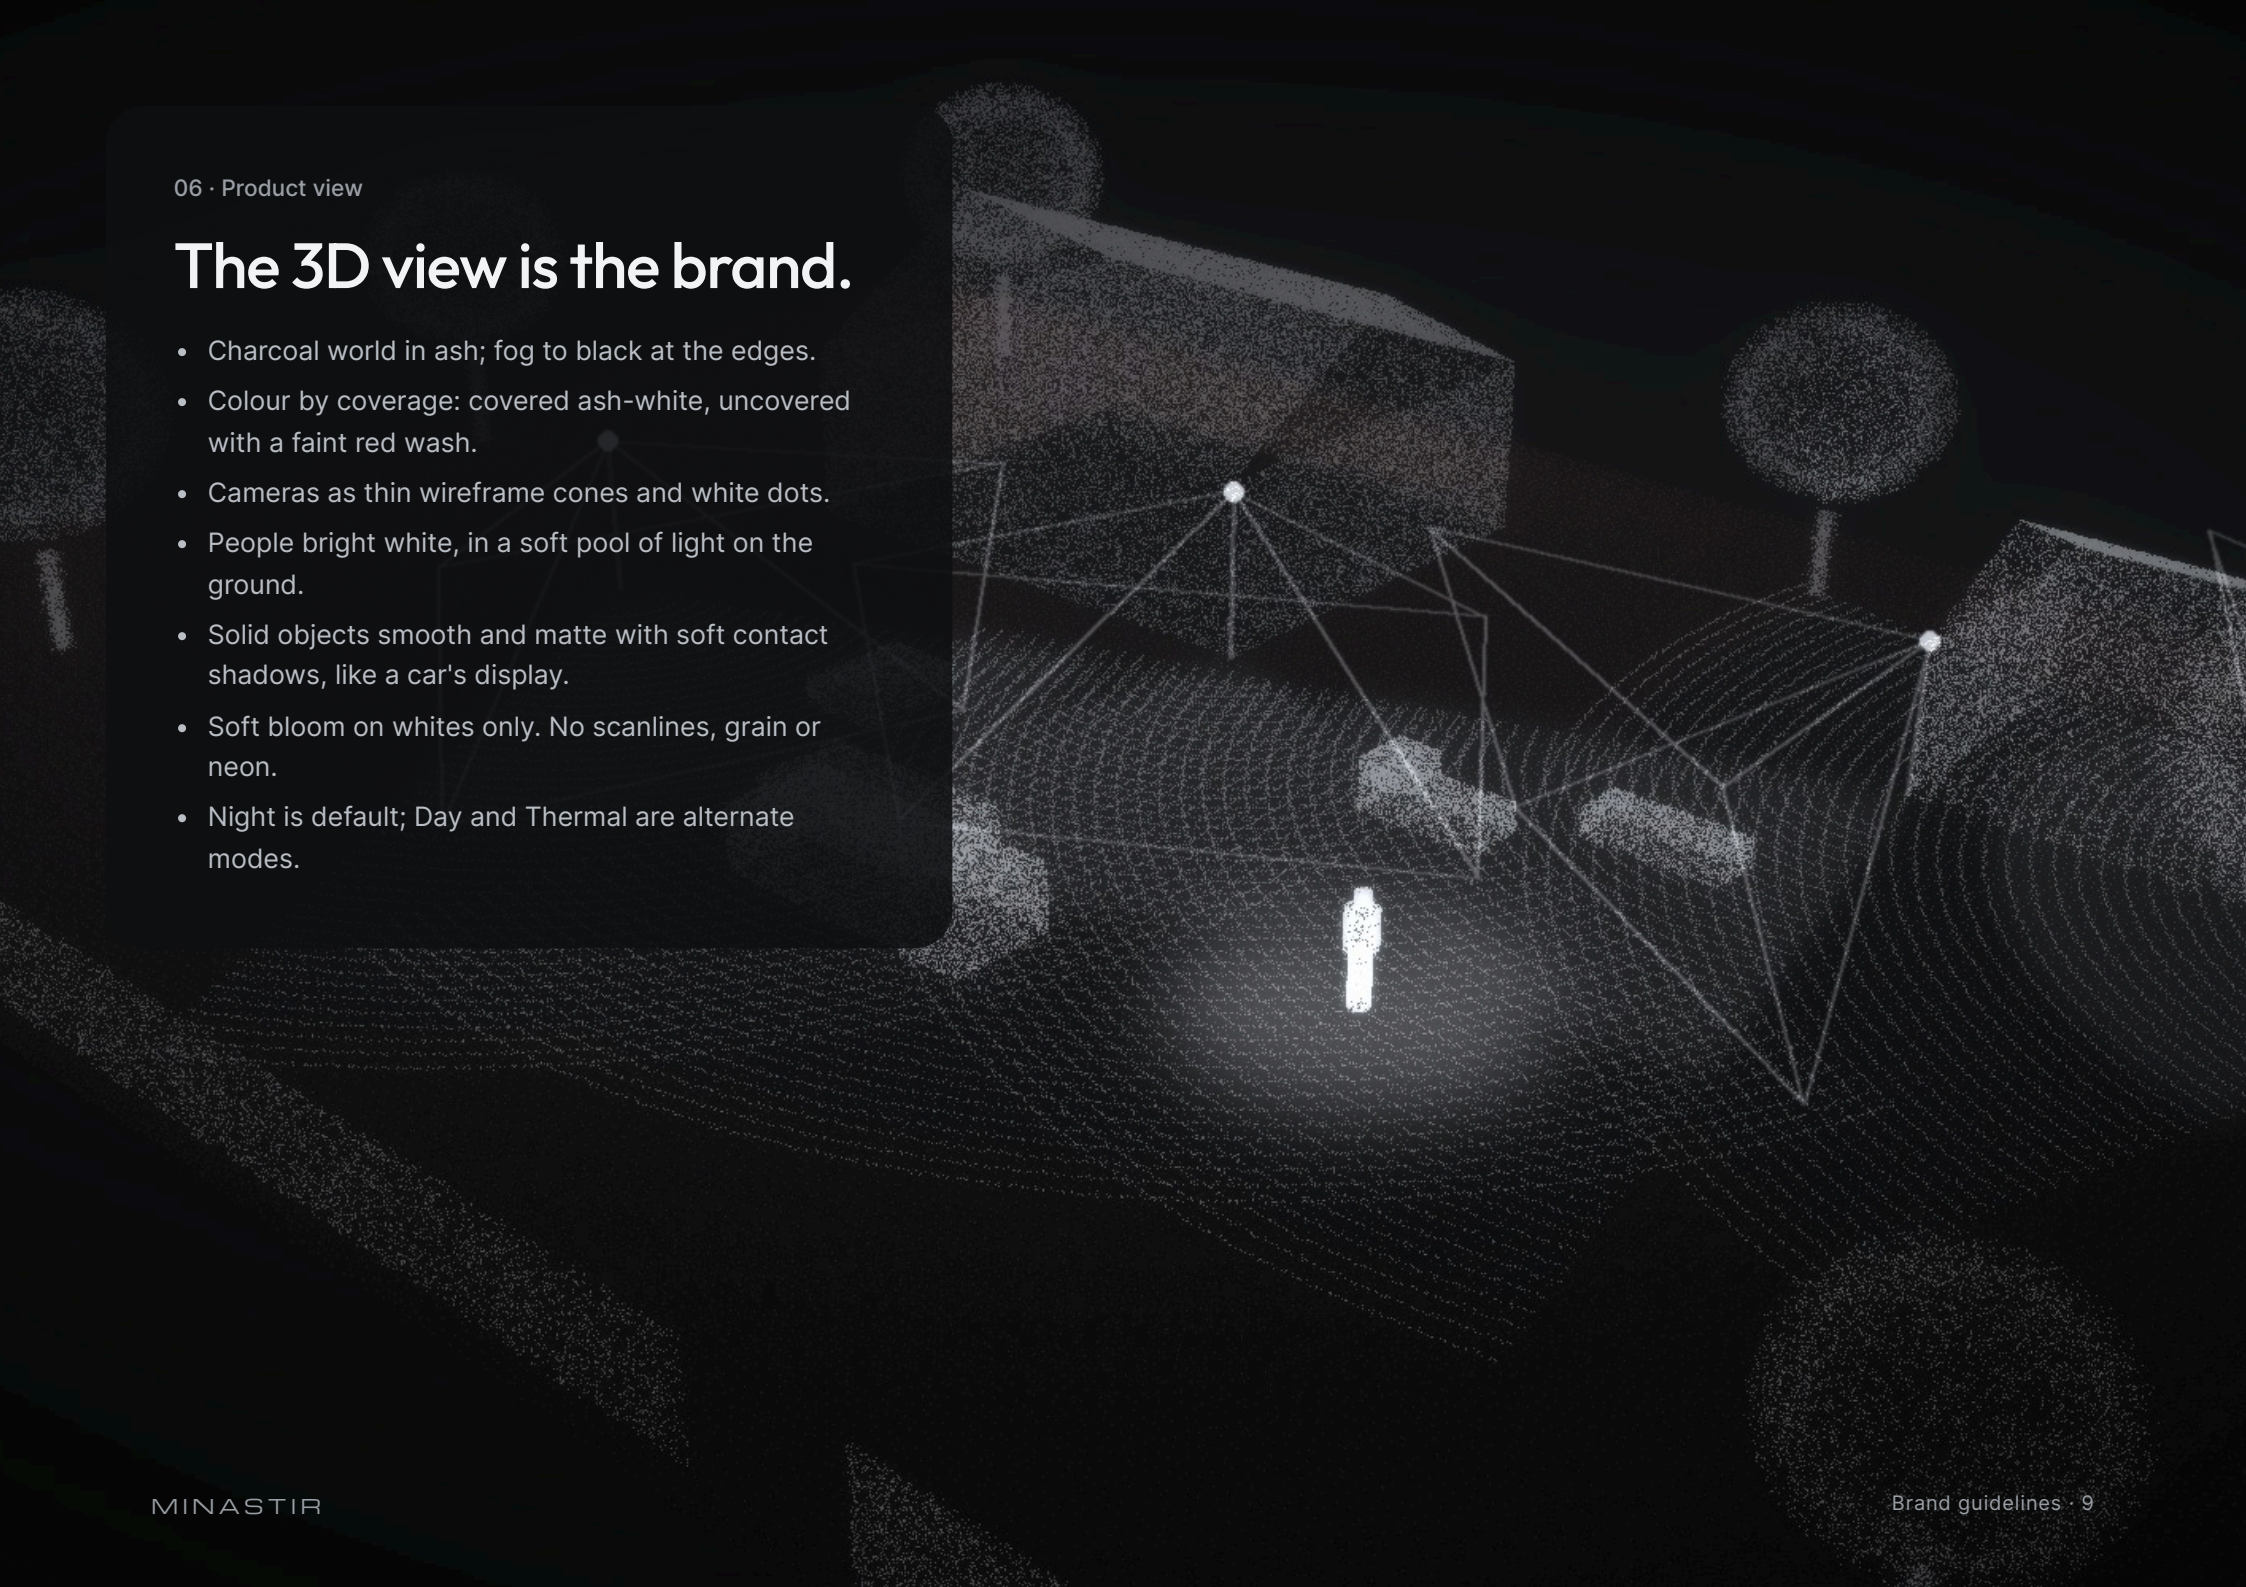

Radius 8 / 12 / 20 px for chips, cards, media. 4px spacing grid. Hairlines over shadows; depth lives in the 3D view.

06 · Product view

The 3D view is the brand.

- Charcoal world in ash; fog to black at the edges.
- Colour by coverage: covered ash-white, uncovered with a faint red wash.
- Cameras as thin wireframe cones and white dots.
- People bright white, in a soft pool of light on the ground.
- Solid objects smooth and matte with soft contact shadows, like a car's display.
- Soft bloom on whites only. No scanlines, grain or neon.
- Night is default; Day and Thermal are alternate modes.

Brief, exact, unhurried.

- **Plain and measured.** "Covers 84% of bay 3", not "AI-driven coverage insights".
- **Quiet.** Like a car telling you the door is open. "East fence is covered. The side gate isn't."
- **Calm under pressure.** What, where, when: "Driveway camera offline · 2:14 am". No exclamation marks.
- **Spatial verbs.** See, place, map, cover, watch. Avoid "monitor", "surveil", "track people".
- **Privacy first.** We watch places, not people. No identifiable faces in marketing.
- **Light Tolkien.** The name carries the lore; one nod per page at most.

Say	Don't say
See the whole ground.	Unleash the all-seeing eye!
3 blind spots found on the east fence.	DANGER: coverage gaps detected!!
Works with the cameras you already own.	Revolutionary next-gen AI surveillance.

Supporting lines (one per surface)

Every camera. One world. · Blind spots, named. · From sixteen feeds to one view. · Know what every camera sees. · Stop watching tiles. Start watching the place. · Home: Every corner, one view.

Five launch ideas.

From sixteen feeds to one view

Split visual: a 4×4 wall of feeds beside the same site as one 3D map. Hero, LinkedIn video, trade-show banner.

Blind spots, named

Free coverage audit: percent covered per zone, blind spots in red. The report is the ad.

Rewind the place

An incident replayed across the whole site at once, every camera in sync.

See your whole home at once

The prosumer door: a house and yard in Night mode, set up in an evening, works with UniFi, Reolink, Hikvision.

The watch tower

Brand film: a slow orbit up a dark site to a single white point. "Every great watch had a tower. Now your cameras do."

Channels

LinkedIn and YouTube for pro; Reddit (homelab, Ubiquiti, homesecurity) and Product Hunt for prosumers; security integrators in Australia first.

Which file to use.

Logos / Mark	Two-tone for dark and light, mono black and white. SVG, and PNG at 512 and 1024px.
Logos / Lockup	Mark plus wordmark, four colourways. SVG, and PNG at 2400px wide.
Logos / Wordmark	MINASTIR alone, white and black. Letters are outlined, so no font is needed.
Logos / App icon	1024, 512 and 180px (Apple touch icon), plus SVG.
Logos / Favicon	favicon.ico (16, 32, 48), PNGs and SVG.

Use SVG wherever you can: websites, slides, print. Use PNG for email signatures, social profiles and tools that don't take SVG. Fonts are free from Google Fonts: Michroma, Outfit and Inter.
